### Work Experience

---

Adaptiva, Inc

November 2018 - Present

**Front End Engineer** • *Bellevue, WA*

- Work on a small team of designers and developers to deliver a cloud based user interface for industry leading vulnerability management software.
- Engineer fully customizable dashboards and data visualization tools for Fortune 500 and government clients seeking quick, comprehensive overviews of the health and behavior of thousands of endpoints.
- Communicate daily with designers and backend developers, facilitating the flow and representation of massive amounts of data from our SQL databases to the browser.
- Attracted the business of Fortune 500 clients by rebuilding and shipping an outdated interface in line with the release of a new vulnerability remediation product.

Freelance Web Development

January 2018 - November 2018

**Full Stack Developer** • *Remote*

- Contributed to an ecommerce photography site for a client aiming to manage the organization and filtering of thousands of images. Retrieved data from the Photoshelter API and utilized webpack to lazy load external scripts in an existing project.
- Designed and developed a full stack website for a singer-songwriter to promote shows, sell merchandise and gain followers. Includes a store with a complete checkout process and a protected admin page for the artist to view transactions, add shows and track new subscribers.
- Consulted for a startup in the developing stages of an application which will provide a more streamlined experience for physicians working with electronic health records.

### Personal Projects

---

**Bookkeeper** *Node • Express • Postgres • Sequelize • Javascript • HTML • CSS*

- Full stack social networking application for finding and creating online book clubs, organizing notes, finding recommendations and connecting with fellow readers.
- Utilizes JWT for secure logins and implements complex one-to-many and many-to-many relationships.
